WEB-HOSTED ACCESS CONTROL SERVICE

Protection One's SecureAccess is a truly revolutionary design in access control—leveraging the power and versatility of the Internet to give you instant control over who enters your facilities and instant access to valuable event information.

SecureAccess is the first access control solution to employ secure, wireless wide-area networking to service single, multiple and even remote facilities and doors. It requires no designated PCs or additional networking. No other access control solution is as easy to use. If you can use a Web browser, you can use SecureAccess.

Here's How the SecureAccess System Works:

Customizable, Web-Based Control

As a Web-based system, SecureAccess is simple to install, administer and maintain. All management and control functions are easily set-up and accessed by an authorized user via any standard Web browser.

- Plug-and-play installation right out of the box, requiring no designated PCs or additional networking.
- All management and control functions are set up and accessible by an authorized user via any standard Web browser, from any location, at any time. Providing access to a remote site is as easy as point and click.
- SecureAccess gives the administrator unprecedented control. Access rights can be configured with a simple mouse click, while valuable event information is available instantly through customizable online reports and e-mail notifications.

A TurnKey, Managed and Hosted Service

Protection One provides the necessary software online, so there's no need for dedicated computers. Plus, all required system updates are managed for you.

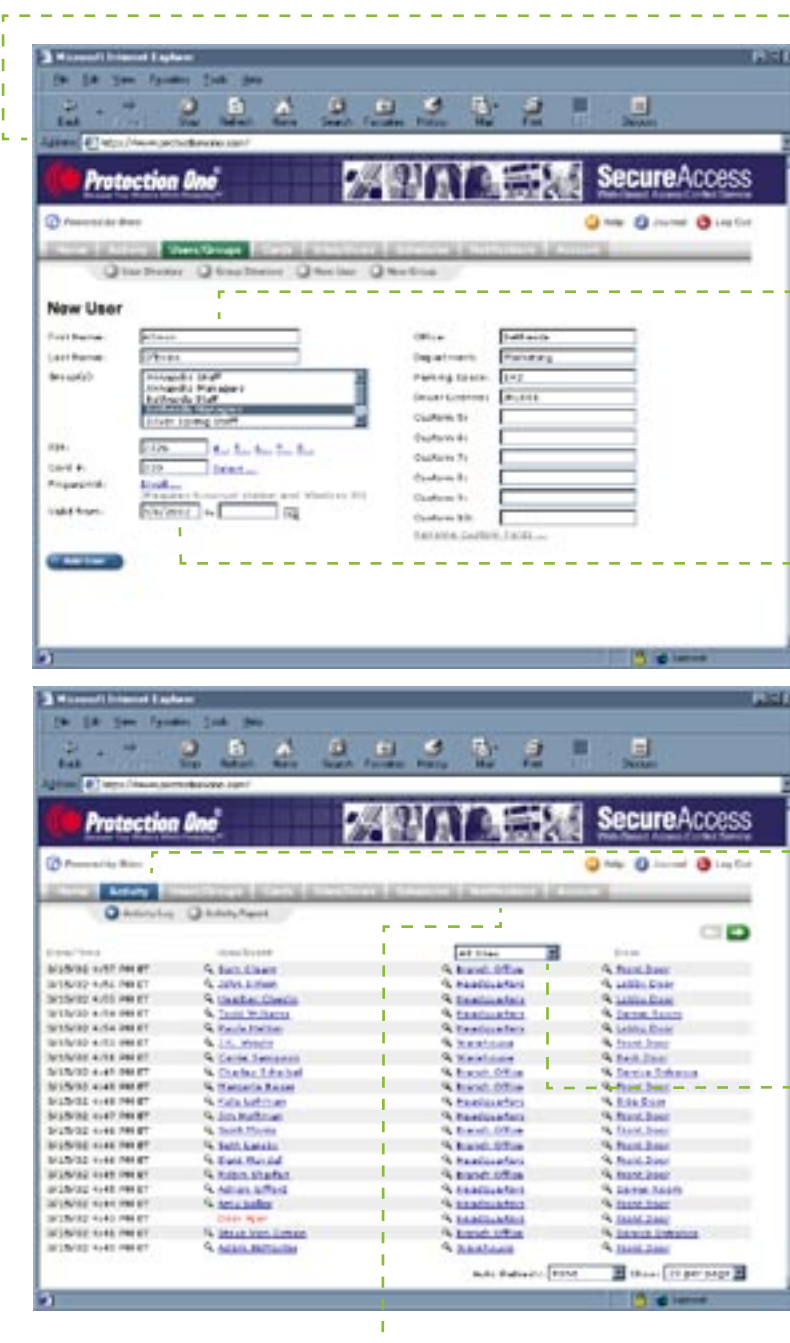

- SecureAccess data is centrally located at Protection One's secure hosting center, archived automatically and protected in redundant databases.
- The SecureAccess application is managed, hosted and made available over a secure internet connection or dedicated phone line.
- SecureAccess benefits from full-time network monitoring by a staff of security professionals to ensure an unparalleled customer experience.

Multi-Location Access for Maximum Control

Protection One uses sophisticated Internet and wireless technologies to make access control both easy and secure. By leveraging the versatility of wide area networking, multiple facilities can be networked instantly and easily.

- The flexibility to add new employees, doors and locations without hassle because no Internet connection or phone line is required.
- Remote control over all of your doors from one central location, even if you have dozens of remote facilities.
- A cost-effective, scalable solution designed to work the way you work and grow when your business grows.

Enter @ Any Browser

To get started, just enter your user ID and administrator credentials.

Manage All Users With Ease

Adding and deleting users is as easy as point and click. All the user functions you need are in your online account.

Grant Limited Access to Groups

With a mouse click, you can apply user-defined templates for group access control rights: only on weekdays, never on Tuesdays, only between 8:15 a.m. and 6:00 p.m. . . . you decide.

Review Activity Logs

Instantly access history by user, facility or even down to individual doors.

Manage Multiple Facilities

All locations—even remote—are available for review online any time in real time.

Create Customized Notifications

Receive instant e-mail notifications of defined access or alarm events.
